

**Key Priorities DAS business objectives:**

**Reduce** the number of older and younger adults whose long term support needs are met by admission to care homes.

**Increase** the number of customers whose short term support services enable them to live independently for longer

**Increase** the number of older people who stay at home following reablement or rehabilitation

**Sustain** the current performance on delayed transfers of care from hospital

**Prevent**, reduce or delay the need for care

**Priority- Reduce the number of older and younger adults whose long term support needs are met by admission to care homes**

**Indicator: Long-term support needs of younger adults (aged 18-64) met by admission to residential and nursing care homes, per 100,000 population (ASCOF 2A(1))** (low is good)

**Analysis:** This national indicator looks at planned admissions and as such includes 12 week disregards, so potentially some of those included will eventually become self funders.

This includes people within the age group 18-64 who have physical disabilities, learning disabilities or mental health issues. Controls are in place to ensure that permanent admissions are minimised and are only used where there is no other support available in a community based setting. Work is ongoing to ensure that maximum use is made of services such as supported living, and all options to support young people to remain living independently or with families are considered as a priority.

The admission rate per 100,000 of the younger population for Worcestershire was 20.5 for the year to the end of Mar-19 - this was higher than local and comparator group results for the previous year. (2018-19 comparator results have not yet been published but should be available for the next scrutiny report).

Admissions had risen throughout 2018-19- with 70 young people being admitted in comparison to 61 in the year before. During Q1 2019-20 results have been gradually falling with the results for the year to the end of Jun-19 being 59.

The target for 2019-20 has been set at a rate of 16 per 100,000 population ie in line with the latest comparator performance available.

**Priority- Reduce the number of older and younger adults whose long term support needs are met by admission to care homes**

**Indicator: Long-term support needs of older adults (aged 65 and over) met by admission to residential and nursing care homes, per 100,000 population (ASCOF 2A(2))** (low is good)

**Analysis:** This national indicator looks at planned admissions and as such includes 12 week disregards, so potentially some of those included will eventually become self funders. All people over the age of 65 are including in this indicator.

Measures are in place to control all permanent admissions to either residential or nursing care. Any new placements can only be approved at Area Manager level and all new high cost placements go through a scrutiny panel.

The admission rate per 100,000 of the older population for Worcestershire was **650.6** at the end of Mar-19 based on 866 admissions (revised with updated population figures). Although comparator results for this year are not yet published this is above the comparator rates for the previous year. Monthly data is shown for 2019-20 but this covers a full year to the end of the month so all the data is comparable. Results for Q1 show the number of admissions are reducing slightly - although well above the target which was set in line with comparators for the previous year (noting good performance is low). The reduction in the number of admissions is however positive as it is set against a climate of an ageing population, and the demands from self-funding and CHC pickups.

**Priority: Increase the number of customers whose short term support services enable them to live independently for longer**

**Indicator: Proportion of people with no ongoing social care needs following reablement after hospital discharge** - Sequel to short term services to maximize independence (ASCOF 2d) (high is good)

**Analysis:** This is a national ASCOF indicator which measures rehabilitation success rates for older people, in terms of the percentage who no longer require services following a reablement service. In Worcestershire this relates solely to services provided by the urgent promoting independence team. A service which is available to support hospital discharge. As such the service is working with people with increasingly complex needs. Despite the increasing acuity of people requiring the service performance has increased over the last year and remains high in Q1 2019-20. DAS set a stretch target for 2018-19 for this measure at 81% and have further increased this for 2019-20 to 83.5%. This target was set at the start of the financial year and was based on achieving good performance in comparison to similar authorities/nationally based on the most recent data available at that time which was 2017-18 performance.

National results for 2017-18 are shown on the graph - comparator and England lines. At 82.4% for Jun-19, Worcestershire is currently achieving just below the comparator average 83.5% for this period, and above the England average of 77.8%. Performance achieved by other authorities is very much linked to the type of service included in this measure. As Worcestershire's service targets people coming out of hospital with complex needs it will be more difficult to perform at levels

**Priority- Increase the number of older people who stay at home following reablement or rehabilitation**

**Indicator: Older people remaining at home following hospital discharge and a reablement service** - Proportion of 65+ who were at home 91 days after discharge from hospital into reablement/rehabilitation services (ASCOF 2b) (high is good)

**Analysis:** This is a national indicator used as a supporting metric for the Better Care Fund program. It measures the percentage of older people who have gone through a reablement program on discharge from hospital and are still at home 91 days later, on a quarterly basis. Reablement services include some that are health led.

The 2019-20 target for this indicator is 81.8% , it was previously set as a stretch target in 2017-18, but has been reduced to be in line with performance in similar/comparator authorities (2017-18 as this is the latest comparator data available).

For those who need support we aim to help them remain independent for as long as they can and reablement services support people to achieve this where possible.

The needs of people going into these services continue to become more complex making it increasingly challenging to ensure that they are at home after 91 days. The acute hospitals continues to be under increasing pressure, and there continues to be higher acuity in patients discharged to these services . Despite this performance on this measure has remained high for Q1.

**Priority- Sustain the current performance in delayed transfers of care from hospital**

**Indicator: No of days people are delayed in hospital each month that are a social care responsibility** - No of days delayed per month (responsibility of social care, in and out of County) (low is good).

**Analysis:**

Data on delayed transfers from hospital is published nationally and the results are shown here to Jul-19. The Directorate has worked effectively with health colleagues to ensure that pathways are available to patients coming out of hospital and all delays including social care delays are kept to a minimum. Social care delays in Jul-19 are lower than in the previous month and well below the number in Jul-18

**Priority: Prevent, reduce or delay the need for care**

**Indicator: Annual care package reviews completed** - Percentage of people in services for 12 months who had a review completed in those 12 months or whose review is in progress at that point (high is good)

**Analysis:** This is a local measure that looks at people who have been in receipt of services for a year or more and checks that they have been reviewed in that period. Up until Mar-17 this measure was set at 15 months. DAS have maintained the target 95% whilst reducing the time allowed to 12 months. Performance has improved steadily through the year and is 94% at Mar-19. Performance in Q1 has dropped slightly to 92% with the decrease being largely within the learning disability service. However there is a plan in place to address these picking up reviews on a geographical basis. All reviews , previously carried out by a central reviewing function, have now been passed over to the Area and Learning Disability teams.
