Specialists in Investment Risk and Return Evaluation

Portfolio Evaluation Ltd Market Commentary Q2 2022 (Sterling)

Quarter one has witnessed markets performing negatively for the second consecutive quarter; in fact, excluding global property and commodities, all primary listed asset classes have had negative returns this quarter. This negative return run has now extended to all primary equity markets excluding the UK and global value indices for the year results. Within global sectors the majority have had positive returns with notable high returns from traditional value sectors and low returns from growth sectors and consumer discretionary stocks. Bonds have also had negative returns for the year. It should be noted that over the three-year period whilst equities have typically had positive numbers that only the US and global equity indices (driven by the US) have had returns over 5% per annum, whilst the primary bond indices have all generated negative returns over the three-year period. It should be noted that many of our institutional clients have benefitted from high returns in 'alternative' asset classes such as Private Equities, Infrastructure and Property.

Although most of the world has moved beyond the COVID-19 pandemic, the impact of financial policies and economic problems have created high inflation, supply problems and other uncertainties going forwards. The uncertainty has been increased by the invasion of Ukraine by Russia. The developed world is facing high inflation (except for Japan), higher interest rates, and higher energy prices. All this coupled with high commodity prices and higher energy prices has led the west facing a possible recessionary environment (which when coupled with high inflation has proven to be a poor environment for equities historically). We also have additional problems in that further disruption of Russian energy supplies to Europe (either through an EU boycott or an embargo from Russia) may occur. The one thing that appears certain is that Central Bankers are willing to treat inflation as the number one problem and will increase interest rates accordingly.

PORTFOLIO EVALUATION

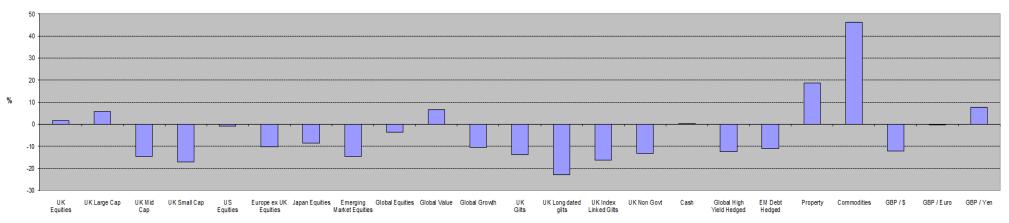

Specialists in Investment Risk and Return Evaluation

As always, the US appears the best positioned to have a limited downturn; however some market commentators are forecasting a US recession as they have been casting doubt on the Feds ability to deliver a soft economic landing (for example we have recently received data showing that a number of US companies are slowing hiring). This is likely to be followed by a European one especially as Europe is more closely linked to Russian energy and the war with Ukraine combined with a paucity of monetary options available to the ECB given the diverse range of economies in Europe. As regards the UK the BofE is also increasing interest rates (albeit slowly), but the country now has the problem of a government that is 'dead in the water' until the autumn after deciding to increase the taxation burden on both individuals and companies.

From an investor perspective it all depends on how much of this uncertainty is already priced into the market. Market commentators do not seem to have any consensus view apart from many of them retaining a neutral exposure to equities (albeit this is lower than the collective position on equities as at the beginning of the year).

We must also be aware of the impact and need to address moving to a carbon neutral world given recent events. Not surprisingly going carbon neutral has taken a back burner for now; however hopefully this is temporary as perhaps a move away from Russian energy will be replace by a greater delivery of renewables.

Investment Returns for the Year Ended 30th June 2022

Risk within asset classes and correlations has increased over the year. The outlook for market risk is uncertain .

Worcestershire County Council Pension Fund - Commentary Period ending 30th June 2022

QUARTERLY SUMMARY: Worcestershire County Council Pension Fund Return: -4.7% Benchmark Return: -3.5% Excess Return: -1.2%

- The Fund has had quite a significant equity transition this quarter; it has funded two new portfolios, namely the LGPSC Global Sustainable Equity Active Targeted Fund and the LGPSC Sustainable Equity Active Thematic Fund. These, plus some of the Alternative portfolio investments, were funded by significant sales of units from the L&G UK, North America, and Europe x UK equity index Funds. This also resulted in the benchmark being restructured. The Fund has had some of its new alternative having drawdowns recently, of particular note were the significant contributions to the Stonepeak IV Core Infrastructure Fund and the Bridgepoint Private Debt III Fund. Given the transition activity and the funding of a number of new alternative asset funds it would not be unreasonable to expect there to be a negative drag on the return of the Fund.
- The Fund and its benchmark have both generated negative returns, and the Fund has underperformed its benchmark by -1.2% excess. The EPO over this period has had a positive influence on the Total Fund (and therefore the capital value of the Fund) and benchmark return; this is as would be expected in negative markets; however the excess return was negatively impacted due to the varied performance of markets over different months. Positive excess has also been generated via the outperforming Infrastructure assets. The primary areas of underperformance have been generated by Active Equities (the Nomura Far East portfolio, the LGPSC EMM equity portfolio, the LGPSC Global Sustainable Equity Active Targeted Fund and the LGPSC Sustainable Equity Active Thematic Fund all underperformed). Property and Fixed Income assets have also underperformed. It should be noted that the Fund had a transition period for the two new LGPSC Funds and whilst the provided data was limited it appears that this was a drag on performance.
- Within the primary asset classes, infrastructure assets were the highest returning generators over the quarter at 4.5%. Property assets had a return of 2.6%. Equity assets (inc EPO) generated a return of -6.7% whilst equities ex EPO the return was a lower -7.2% (i.e. the EPO has added value this quarter). Within equities, the Active pool was the lowest return generator at -8.8% (underperforming its benchmark by -4.4%) whilst the Alternative Pool had a return of -8.7% (approximately in line with the benchmark) and the Passive Pool a return of -7.1% (approximately in line with the benchmark).
- The recently established Total Fixed Income asset class has underperformed and is underweight its strategic asset allocation (note that equities remain overweight their strategic asset allocation).
- The latest valuation data supplied by Bridgepoint, Green Investment Bank, Gresham House, Hermes, Invesco UK Property Fund, Stonepeak Partners, VENN and Walton Street is lagged by three months and was for periods ending March 2022.

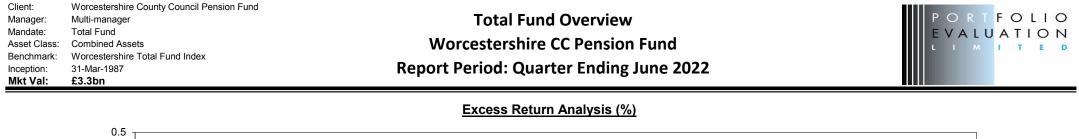

YEAR SUMMARY: Worcestershire County Council Pension Fund Return: -2.5% Benchmark Return: 0.1% Excess Return: -2.6%

• The Fund and its benchmark have generated negative returns and the Fund has underperformed its benchmark by -2.6% excess. The underperformance has been primarily generated by equity assets, and partly by the performance of the Property assets and Fixed Income assets which significantly underperformed their benchmarks. With the exception of the Infrastructure pool all other primary asset classes have underperformed. It should be noted that many of the Alternative asset pools are investing in new portfolios; these types of portfolios often underperform initially due to the expenses of these funds 'investing' and that it takes time for many of these vehicles to generate positive significant returns from their investments.

- The Fund has been impacted negatively by being underweight UK equities as this has provided the collateral for the EPO strategy (this is held in short dated bonds) therefore reducing the exposure to this asset group. In effect, the Fund may appear to have a negative excess return contribution due to benchmark mismatch as the benchmark has not been adjusted to reflect the collateral programme. However please note that the structure and objective of the EPO (including the collateral) is expected to counterbalance this underweight UK position and return expectations; it has generally achieved this. The options overlay programme has increased the Fund return over the year and has performed as expected (it should be noted that the bond collateral part of the strategy did perform in line with a short dated bond index; however within the structure of the Fund no benchmark is assigned to these assets).
- Infrastructure assets generated the highest return of 18.5% followed by Property with a return of 6.2%. Equity assets were the next highest return generators over the year and excluding the overlay generated a return of -5.2%. Within equities the Passive Pool was the highest return generator followed by the Alternatives Pool and finally the Active Pool (generating returns of -1.2%, -5.2% and -16.2% respectively), all of them underperformed their benchmarks. Fixed Income assets had a return of -12.2% underperforming by -5.8%.

THREE YEAR SUMMARY: Worcestershire County Council Pension Fund Return: 4.8% p.a. Benchmark Return: 5.0% p.a. Excess Return: -0.2% p.a.

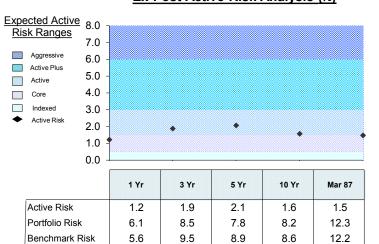

- Over the three-year period, the Fund has generated a positive return of 4.8% p.a. and has underperformed the benchmark by -0.2% p.a. It should be noted that there has been a significant number of new mandates established in that timeline especially in the property, infrastructure and bond asset classes. Additionally the equites have been restructured.
- The equity protection overlay program has increased the Fund return over the three-year period (by 0.6% p.a.) but given the volatility and variation of returns in markets this is liable to fluctuate (relative to benchmark). It should also be noted that the EPO strategy has lowered the volatility of the Fund as expected.
- The Total Risk and Active risk are consistent with a typical multi asset class fund that uses both passive and active strategies.

5.0 All returns for periods in excess of 1 year are annualised. The portfolio return is net.
