Children and Young People's National Transformation Programme Workstreams

Complications from Excess Weight (CEW) Clinics

By 2022/23 we will treat up to a further 1,000 children a year for severe complications related to their obesity, such as diabetes, cardiovascular conditions, sleep apnoea and poor mental health.

Data & Digital

To ensure that high quality, timely data is available and used on a national and local level to provide a holistic overview of children and young people's health and care and to drive improvements in their outcomes and experience. To support digital solutions and appropriate local data sharing agreements as enablers of person-centred, multi-agency, integrated care.

Asthma

To prevent deaths, reduce the number admissions and improve the quality of life of CYP with asthma

Keeping Children Well

We aim to work with leading health and care systems to understand how to improve outcomes for CYP by working across health, care and education where there is a shared ambition (i.e. vulnerability, speech language and communication needs)

System-wide Paediatric Observations Tracking Programme (SPOT)

To create a platform that facilitates a standardised and interoperable method of tracking and detecting the deteriorating child. This system will adapt and expand the inpatient paediatric early warning score into ED, community, ambulance and primary care, creating aligned tools, training in communication and evaluation to deliver a cross-system approach to acute deterioration in paediatrics.

NHS Long Term Plan – a strong start in life for children and young people

- Children and Young People (CYP) represent a third of our country. Their health and wellbeing will determine our future. Recent years have seen improvements in certain services which have been singled out for action, but there is a mixed picture overall.
- The NHS Long Term Plan (LTP) set out a vision for the future of the NHS including action to improve the health and wellbeing of children and young people.
- The Children and Young People Transformation Programme was established to oversee the delivery of LTP commitments in relation to children and young people.
- The COVID pandemic has also highlighted further areas of development which are also being taken forward by the CYP Transformation Programme.

Transition

By 2028, no child, young person or adolescent will be able to become lost in the gaps between children's and adults services, and that their experience of moving between services is well planned and prepared for and they feel supported and empowered to make decisions about their health and social care needs.

Urgent & Emergency Care

To reduce avoidable CYP A&E attendances, identify innovative, more integrated models of care and areas of positive practice, and test the feasibility of a national paediatric NHS111 Clinical Assessment Service (CAS) and evaluate its impact on patient pathways and wider local system.

Mental Health/Physical Health integration

We will work across NHSEI to ensure that the paediatric workforce is supported when caring for children and young people presenting to hospital with acute mental health needs such as eating disorders or crisis presentations; and understand where to get additional support.

Voice

To collaborate with and embed the voice of children, young people, and families across our programme of work.

Integration

Work with local health systems to co-develop what good looks like to integrate care both horizontally – across health care and education; and vertically – across secondary, primary and community care.

Long term conditions

To improve quality of care and outcomes for children with diabetes and epilepsy
