Portfolio Evaluation Ltd Market Commentary Q3 2022 (Sterling)

Quarter three has witnessed primary market indices performing negatively for the third consecutive quarter; in fact, except for commodities all primary listed asset classes (in local currencies) have had negative returns this quarter. Please note that the charts below are in GBP terms and therefore the positive returns in US and global equities reflect the strong dollar / weak sterling and the weight of USD assets in the global indices. It should also be noted that bond yields rose across the world resulting in negative returns for bond markets, negative returns were particularly notable for longer maturity bonds. This negative return run has now extended to all primary indices (in local terms) excluding the UK large cap and global value (due to dollar strength) indices for the year results. Within global sectors the majority have had negative returns except for commodities. One of the primary trends has been the strength of the dollar (although this may have peaked now) over the year especially versus sterling which has been weak; however, against a wider basket of currencies sterling has not depreciated as much. It should be noted that in the early part of October that markets have worsened especially in the UK which has been exacerbated by a weak government pushing unfunded tax cuts (much of which has been reversed by mid-October) and the BoE that has been cautious about raising interest rates i.e. we have had a government trying to introduce a looser fiscal policy whilst the BoE has been tightening monetary policy.

Quarterly Investment Returns for the period ended
30th September 2022

It should be noted that many of our institutional clients have benefitted from high returns in 'alternative' asset classes such as Private Equities, Infrastructure, Private Debt and Property but it should be noted that much of the data is lagged and returns may soften as valuations are updated (we have seen some data from the US that would indicate this). It should also be noted that many of our clients are continuing to fund 'alternative' asset portfolios.

Some clients are being impacted by increasing yields requiring LDI portfolio margin accounts to require significant funding; this in some instances is requiring selling other portfolio assets and it should be noted that the BoE had to assist this part of the market in early October.

Although we continue to face problems from the war in Russia and Ukraine and the linked fuel and gas problems and have continued to see high commodity prices and supply problems, we are also seeing some old problems impact on the global economy such as aging demographics and high levels of debt. One of the problems is also declining real disposable income, this will worsen as interest rates increase as central banks raise rates to lower inflation. It is looking increasingly likely that there will be a global recession and a soft landing in 2023 may be hard to achieve.

From an investor perspective it all depends on how much of this uncertainty is already priced into the market. Market commentators do not seem to have any consensus view apart from many of them retaining a neutral exposure to equities (albeit this is lower than the collective position on equities as at the beginning of the year). The only common theme is that many investors expect the situation to worsen in Q4.

Investment Returns for the Year
Ended 30th September 2022

Risk within asset classes and correlations has increased over the year. The outlook for market risk is uncertain.

Worcestershire County Council Pension Fund - Commentary

Period ending 30th September 2022

QUARTERLY SUMMARY: **Worcestershire County Council Pension Fund** **Return: -0.4%** **Benchmark Return: -1.0%** **Excess Return: 0.6%**

- This quarter saw the R&M EPO strategy overlay fund largely liquidated in September pending review; whilst the derivatives have been unwound the cash and collateral bonds remain in place during the review process. This quarter there was a significant drawdown from the L&G North American Equity Index Fund. This and other cash were used to Fund investments in the Bridgepoint III Private Debt Fund, BSIF Infrastructure II Fund, Stonepeak IV Infrastructure Core Fund, Venn II Euro Property and the BSIF Forestry Growth Sustainability Fund. Given the transition activity and the funding of a number of new alternative asset funds it would not be unreasonable to expect there to be a negative drag on the return of the Fund.
- The Fund and its benchmark have both generated negative returns, and the Fund has outperformed its benchmark by 0.6% excess. The EPO over this period has had a negative influence on the Total Fund (and therefore the capital value of the Fund) and benchmark return; this is as would be expected in volatile markets and because of the removal of the strategy in September (September was a negative performing market).
- Equity returns have been broadly in line with the benchmark as the Nomura Far East portfolio and the new LGPSC Global Sustainable Equity Active Targeted Fund and the LGPSC Sustainable Equity Active Thematic Fund, unfortunately the LGPSC EMM underperformed. The primary areas of outperformance have been generated by Property, Corporate Debt Fund and Infrastructure (nearly all Funds). It should be noted that the negative depreciation of sterling has been a positive contributor to the Fund, especially as many of the Alternative Asset Fund are non-GBP.
- Within the primary asset classes, infrastructure assets were the highest returning generators over the quarter at 5.1, %. Property assets had a return of 1.7%. Equity assets (inc EPO) generated a return of -1.0% whilst equities ex EPO the return was a higher -0.7%. Within equities, the Alts pool was the highest return generator at 1.0% (underperforming its benchmark by -0.2%) whilst the Active Pool had a return of -1.1% (approximately in line with the benchmark) and the Passive Pool a return of -1.8% (approximately in line with the benchmark).
- The recently established Total Fixed Income asset class has underperformed and is underweight its strategic asset allocation (note that equities remain overweight their strategic asset allocation).
- The latest valuation data supplied by Bridgepoint, Green Investment Bank, Gresham House, Hermes, Invesco – UK Property Fund, Stonepeak Partners, VENN and Walton Street is lagged by three months and was for periods ending June 2022 whilst the Gresham House Forestry Fund has a lag of 6 months.

YEAR SUMMARY: **Worcestershire County Council Pension Fund** **Return: -3.8%** **Benchmark Return: -2.3%** **Excess Return: -1.5%**

- The Fund and its benchmark have generated negative returns and the Fund has underperformed its benchmark by -1.5% excess. The underperformance has been primarily generated by equity assets, and partly by the performance of the Property assets and Fixed Income assets which significantly underperformed their benchmarks. With the exception of the Infrastructure pool all other primary asset classes have underperformed. It should be noted that many of the Alternative asset pools are investing in new portfolios; these types of portfolios often underperform initially due to the expenses of these funds 'investing' and that it takes time for many of these vehicles to generate positive significant returns from their investments.

- The Fund remains underweight UK equities as this has provided the collateral for the EPO strategy (this is held in short dated bonds) therefore reducing the exposure to this asset group. In effect, the Fund may appear to have a negative excess return contribution due to benchmark mismatch as the benchmark has not been adjusted to reflect the collateral programme. However please note that the structure and objective of the EPO (including the collateral) is expected to counterbalance this underweight UK position and return expectations; it has generally achieved this. The options overlay programme has increased the Fund return over the year and has performed as expected (it should be noted that the bond collateral part of the strategy did perform in line with a short, dated bond index; however, within the structure of the Fund no benchmark is assigned to these assets). Much of the EPO derivative programme was unwound in September.
- The most significant drag on excess return was generated by the LGPSC EMM Fund and the transition portfolio in the quarter ended June 2022. The highest positive contributor to excess return was Infrastructure assets.
- Infrastructure assets generated the highest return of 20.3% followed by Property with a return of 7.1%. Equity assets were the next highest return generators over the year and excluding the overlay generated a return of -7.9%. Within equities the Passive Pool was the highest return generator followed by the Alternatives Pool and finally the Active Pool (generating returns of -5.1%, -6.2% and -16.4% respectively), all of them underperformed their benchmarks. Fixed Income assets had a return of -17.6% underperforming by -6.6%.

THREE YEAR SUMMARY: Worcestershire County Council Pension Fund Return: 3.8% p.a. Benchmark Return: 3.9% p.a. Excess Return: -0.0% p.a.

- Over the three-year period, the Fund has generated a positive return of 3.8% p.a. and has performed in line with the benchmark. It should be noted that there has been a significant number of new mandates established in that timeline especially in the property, infrastructure and bond asset classes. Additionally, the equities have been restructured.
- The equity protection overlay program has increased the Fund return over the three-year period (by 0.4% p.a.) but given the volatility and variation of returns in markets this is liable to fluctuate (relative to benchmark). It should also be noted that the EPO strategy has lowered the volatility of the Fund as expected.
- The Total Risk and Active risk are consistent with a typical multi asset class fund that uses both passive and active strategies.

Excess Return Consistency Analysis

Ex-Post Active Risk measures the volatility of the actual excess returns achieved by the Portfolio/Fund.

Excess Return Consistency Analysis measures the frequency of the Portfolio/Fund's outperformance (Blue) and underperformance (Red) versus its benchmark, calculated using monthly (or quarterly if indicated) returns since inception.

**Attribution to Total Excess Return Analysis
Worcestershire County Council Pension Fund
for Quarter Ended 30th September 2022**

Market Value: £3.3bn

The Returns Summary details the Portfolio, Benchmark and Excess Returns. The Excess Returns are plotted, the Asset Allocation Summary details the weights held by the portfolio and benchmark in each asset class/manager. The green plots are the over/underweight exposures of the Fund (v Fund benchmark) at the beginning and end of the period. The Attribution to Excess Return, identifies how each asset class/manager has contributed to the overall excess return of the Total Fund. It is broken down into Asset Allocation (how successful the decision to over/underweight each asset class was) and then into Stock Selection (how well each manager's decisions have performed). The Asset Allocation plus the Stock Selection excess returns are all additive and equal the Total Excess Return of the Fund.
